Markov Random Fields

Application Example

#### Markov Property

A Markov Random Field (MRF) is a graph, (V, Ed), where each graph node,  $l_i \in V$ , corresponds to a random variable.

Locality/Markov property: A node (random variable) is independent of the other non-neighbor nodes given its neighbors:

$$P(l_i|V\backslash l_i) = P(l_i|\mathcal{N}_i), \forall i \in V$$

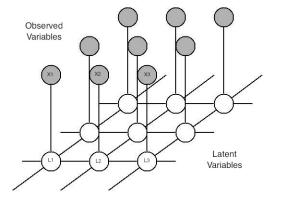

Fabio A. González Ph.D.

Markov Random Fields

Application Example

#### Inference Problem

$$\max_{L} P(L, X) = \max_{L} P(l_1, \dots, l_n, x_1, \dots, x_n)$$

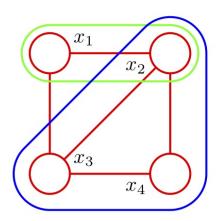

Fabio A González Ph.D.

Markov Random Fields

Application Example

#### Factorization Property

$$p(V) = \frac{1}{Z} \prod_{C} \psi_C(V_C)$$

Fabio A. González Ph.D.

Markov Random Fields

Application Example

#### **Energy Function**

$$\psi_C(C) = e^{-E_C(V_C)}$$
 
$$p(V) = \frac{1}{Z}e^{-E(V)} = \frac{1}{Z}e^{-\sum_C E_C(V_c)}$$
 
$$\max_L \arg P(L, X) = \max_L \arg \frac{1}{Z}e^{-E(L.X)}$$
 
$$= \min_L \arg E(L.X)$$

Fabio A González Ph.D.

Markov Random Fields

Application Example

# Optimization of the Energy Function

- Gibbs sampling: Random samples from a probability distribution. (1984)
- Simulated annealing: MAP solution (1984)
- Iterated conditional modes (ICM) (1986)
- Loopy Belief propagation (2001)
- Graph cuts (2001)
- Max-sum Algorithm

Fabio A. González Ph.D.

Markov Randon Fields

#### Application Example

Methodology Markov Random Fields Model Exploratory Experiments

#### Semantic Image Segmentation

- General goal: to interpret the image content
- Specific goal: to assign semantic categories to some image regions

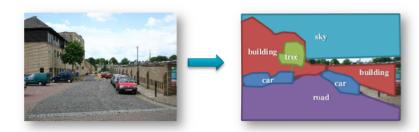

Figure: Understanding the image

# MRF Model (I)

Prediction: given a set of observations to infer the most probable assignations for the latent variables

$$\max_{L} P(L|X) = \max_{L} P(l_1, \dots, l_n | x_1, \dots, x_n)$$

Fabio A González Ph.D

Markov Randor Fields

Application Example

Methodology Markov Random Fields Model Exploratory Experiments

#### MRF Model (II)

$$P(L|X) = \frac{P(X|L)P(L)}{P(X)} = \frac{P(X^{app}|L)P(X^{geom}|L)P(L)}{P(X)}$$

$$E(L) = \alpha E_{app}(L) + \delta E_{geom}(L) + \beta E_{edge}(L) + \gamma E_{prior}(L),$$

#### where:

- $E_{app}(L) = -\sum_{l_i \in V} \log P(x_i^{app}|l_i)$
- $E_{geom}(L) = -\sum_{l_i \in V} \log P(x_i^{geom}|l_i)$
- $E_{edge}(L) = -\sum_{(i,j)\in Ed} \log P(l_i, l_j)$
- $E_{prior}(L) = -\sum_{l_i \in V} \log P(l_i)$

Fabio A González Ph.D.

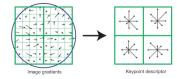

Markov Random Fields

Application Example

Methodology Markov Random Fields Model Exploratory Experiments

#### Appearance Information

- Three types of descriptors SIFT, SURFT and DCT were tested
- SIFT worked better
- Three color components were added

Fabio A. González Ph.D.

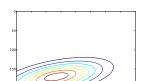

Markov Random Fields

Application Example

Methodology Markov Random Fields Model Exploratory Experiments

# Geometric 2D Information (I)

- Coordinate of the morphological center of each superpixel was recorded
- A probability distribution was estimated independently for each label class (Bivariate Gaussian)
- The vertical axis symmetry of the images was exploited to make the estimation problem easier

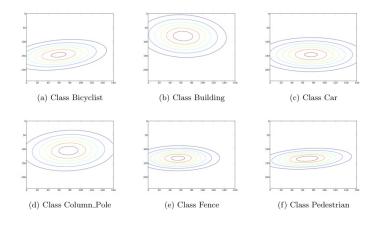

Fabio A. González Ph.D.

#### Data Set

The Cambridge-driving Labeled Video Database (CadVid) is a collection of 701 labeled images (with dimension of 960  $\times$  720 px) that associates each pixel with one of 32 semantic classes.

#### Experimental Results

| Method         | Kind | bicyclist | building | car    | fence  |
|----------------|------|-----------|----------|--------|--------|
| MRF Geo+ App   | 2D   | 14.3%     | 55.4%    | 53.9%  | 32.50% |
| MRF App        | -    | 9.8%      | 52.5%    | 37.7%  | 2.4%   |
| SVM            | -    | 1.26%     | 72.17%   | 35.15% | 0.28%  |
| co-occ&wLg Spx | 3 D  | 28.8%     | 71.71%   | 76.5%  | 4.8%   |

| Method         | Kind | road   | sidewalk | sky    | Average |
|----------------|------|--------|----------|--------|---------|
| MRF Geo+ App   | 2D   | 84.8%  | 55.1%    | 92%    | 43.09%  |
| MRF App        | -    | 84.5%  | 22.8%    | 93%    | 33.29%  |
| SVM            | -    | 76.76% | 8.49%    | 84.81% | 28%     |
| co-occ&wLg Spx | 3 D  | 88.4%  | 84.7%    | 89.5%  | 53%     |

#### Conclusion

Geometrical Information Improves the model!
